<sup>[7]</sup> These values are informative. They were calculated according to ISO Guide 35 and ISO 5725-2 from thirty results from a varying number of laboratories.

### **DESCRIPTION**

ITAK-1025 was prepared from a sample of Bauxite donated by a Bauxite Mining Company from the North of Brazil in 2022.

This Certified Reference Material (CRM) is presented as a fine powder.

### **INTENDED USE AND INSTRUCTIONS**

ITAK-1025 provides an important control in analytical data from exploration and can be used as a tool for grade control in routine mining and laboratory operations.

This Certified Reference Material can be used for calibration of analytical equipment, assess and develop new methods, validation of analytical methods, and arbitration – proficiency testing for example.

The bottles/sachets content should be thoroughly mixed before taking samples of ITAK-1025.

The Certified Reference Material should be used without pre-treatment. ITAK is not responsible for any changes occurring after opening said bottles/sachets.

The Certified Reference Material should be stored in a dry place and without contact with excessive heat or moisture.

The minimum test portion of the Certified Reference Material is 0.5 g.

### **CHARACTERIZATION AND STATISTICAL EVALUATION OF ANALYTICAL DATA**

ITAK-1025 was analyzed by eleven specialized laboratories. The statistical evaluation was carried out according to ISO GUIDE 35 and ISO 5725-2, using: the identification and treatment of outliers, stragglers and technically invalid data, certified value calculation, standard deviation calculation, and extended standard uncertainty calculation.

The Technical Report: RT-001/2023 STD contains full details of all phases of manufacturing, certifying results, participating laboratories, and statistical evaluation.

Note: This report is available on the ITAK database for CRM users.

## **ANALYTICAL METHODS**

The methods used in the characterization of CRM ITAK-1025 are mentioned as follows:

- **a:** Fusion method and determination by X-Ray Fluorescence.
- **b:** Alkaline Digestion (Bayer Process) and determination by Atomic Emission Spectrometry – ICP-OES.
- **c:** Alkaline Digestion and determination by Atomic Absorption Spectrometry – AAS.
- **d:** Alkaline Digestion and determination by Titrimetric Method.
- **e:** Gravimetric Method.
- **f:** Thermogravimetric Method (TGA).
- **g:** Alkaline Digestion and determination by Gravimetric Method.
- **h:** Acid Digestion (HNO<sub>3</sub> and HCl) and determination by Gravimetric Method.

## **PERIOD OF VALIDITY**

This CRM characterization is valid until **February 20, 2033**.
